

InSite™ Virtual Monitoring

reinventing the study site visit

Study Site Monitoring is among the most costly and inefficient elements in clinical trials, leading many sponsors to revise their monitoring practices using risk-based and other strategies. In many cases, these new approaches rely more on data and less on personal contact with study sites.

InSite™ Virtual Monitoring is a new monitoring option that leverages technology while preserving direct personal interaction between CRAs and their sites. InSite enables CRAs to engage with sites in live virtual visits that are personal and productive. CRAs spend less time traveling and more time working with sites, while sites experience reduced burden, better flexibility, and more frequent support from their CRAs.

MedPoint Digital pioneered virtual meeting technology for clinical trials 25 years ago, and brings unrivaled experience and know-how to the challenge of virtual monitoring visits.

Let us demo InSite to you, and see how virtual visits can revolutionize your site monitoring program.

EFFICIENCY

InSite empowers CRAs to perform effective site monitoring more easily and more often, boosting CRA productivity and quality of life.

COST SAVINGS

Virtual visits are up to 80% more cost effective than travel-to visits, making InSite an extraordinary vehicle for more affordable drug development.

QUALITY

Custom pods and built-in workflows provide both structure and versatility, allowing the InSite platform to align with the plan for each monitoring visit.

DATA CAPTURE

As InSite virtual visits proceed, the platform captures every entry, response and click, yielding validated data that flows into the metrics display, real-time reports and pre-populated site visit reports.

InSite™ Virtual Monitoring

reinventing the study site visit

An Array of Tools on InSite™ can support the various activities that comprise your site visit plan. The Insite platform can be configured to provide multiple interfaces that match monitoring plans for each visit. MedPoint Digital provides comprehensive training and support so that CRAs quickly become comfortable and conversant with the platform. Features include:

Two-way Video

CRAs and site members can connect personally with live video.

View Documents

Study documents can be shared for display by either party.

Downloads

It's easy to download key documents during the virtual visit.

Checklists

CRAs can check-off on each activity as the site visit proceeds.

Forms

Forms with data fields can be completed during the session.

Screen Share

Simultaneously view study systems such as EDC, IWRS, etc.

Training

CRAs can effectively deliver live training presentations.

Open Text

Keep notes or capture text responses by two-way texting.

Surveys

Provide sites with a structured tool to provide feedback.

Co-Monitoring

Multiple persons can connect and interact during virtual visits.
